MODELS & TOYS

- 498 **1907 SCHACHT MODEL 'H' BUGGY, a superb scale model which captures the smallest details of this early high wheel automobile, the detailed engine, body name plates, hood, hand brushed paintwork, lamps, pin striping, and diamond buttoned leather interior are amazing. The Schacht was unusual for an automobile of its era, it featured a steering wheel, instead of a tiller and a brass radiator at the front of the buggy. The entire carriage of the buggy was suspended on a pair of semi-elliptic multi-leaf springs, which attached at the front and rear axle beams. The high wheels, although appearing fragile, actually gave the Schacht greater maneuverability than many competitors could offer. This model took more than 1400 man hours to build and is presented with its own museum quality display cabinet, model dimensions 48x34x48cm, cabinet dimensions 118x92x60cm. Superb.
